

## **Safety Alert Bulletin**

SAB004

### **ANSI/SAI A92.2-2001: for Vehicle-Mounted Elevating and Rotating Aerial Devices.**

The standard that applies to the design, manufacture, testing, inspection, installation, maintenance, use, training, and operation of vehicle-mounted aerial devices installed on a chassis has been revised. ANSI A92.2-2001 will become effective **August 1, 2002**.

This standard is an update to ANSI A92.2-1990. The revision may change requirements for each person involved in aerial device sales, ownership, use, and operation. Everyone needs to obtain a copy of the new standard to understand how they are affected and determine what they must do to comply.

You can purchase a copy by going to ANSI web site below. Select "A92 (SAI) Scaffolds and other elevating devices category" and it will lead you through the process to use your credit card to purchase, and then download a copy of the standard to your computer.

Areas that changed on ANSI 92.2-2001 from the previous, ANSI 92.2-1990, are in sections:  
(not a complete list)

3. Definitions:
5. Electrical Systems, Devices and Test Procedures.
6. Responsibilities of Manufacturers.
7. Responsibilities of Dealers and Installers.
8. Responsibilities of Owners:
  - 8.12 Training, Retraining, and Familiarization of Operators. (New)
9. Responsibility of Users: (New)
10. Responsibilities of Operators.
11. Responsibilities of Renters, Lessors or Lessees.

Everyone involved with Vehicle Mounted Aerial Devices (ANSI/SAI A92.2-2001) or Digger Derricks (ANSI A10.31-1995) need to read, study, understand, and comply with the ANSI standards and OSHA regulations.
