Banner contracts takes delivery of versatile Terex Finlay C1540 Cone Crusher

Banner Contracts has boosted its fleet of Terex Finlay machines with a new C1540 Cone Crusher, supplied by Finlay Plant Northern.

The delivery of the C1540 Cone Crusher increases Banner Contracts’ Terex Finlay fleet to eight machines in total.

The plant is also proving a versatile addition for Banner Contracts with its other work, crushing Whinstone making aggregates for asphalt. Aggregate selected for this work must be processed into a clean product of a precise size and shape, and the cone crusher is capable of delivering the cubical shape required.

“Joe Banner, Director of Banner Contracts said: “We have a strong relationship with Finlay Northern, which has developed over a number of years. It started with my father and has continued to progress with my brother and myself.

“We are really happy with the cone crusher's productivity and its adaptability means we can use it on different jobs as and when we require.”

Based in Halnaby, Darlington, Banner Contracts was established in 1992 by Mike Banner.

This latest addition is currently working on Banner Contracts’ limestone operations, crushing 200mm stone down to -50mm. Most of this material is then sent to the onsite kiln.

Charlie Nairn, Director of Finlay Northern Plant, said: “We are happy to have provided this versatile plant to Banner Contracts and extended our partnership with them.

“The C1450 shapes the material well to produce a high value product.”
